

Fish

1. *Ameiurus melas*, *awaazisii
Black Bullhead: Large catfish with black barbels near its mouth, a broad head, spiny fins, a square tail, and no scales. Nocturnal and can thrive in low oxygen, turbid waters.

2. *Ameiurus nebulosus*, *awaazisii
Brown Bullhead: Similar to the black bullhead, but lighter in color with brown-black speckles along the entire surface of the fish. Barbels are yellow.

3. *Ambloplites rupestris*, *gwadaash
Rock Bass: Native to the Great Lakes. These fish have yellow-green-black scales and can change their color to match their surroundings. They are distinguished by red eyes and six anal fin spikes.

4. *Etheostoma exile*
Iowa Darter: Slim, small-bodied fish with a small mouth. Males have red and blue blotches along their sides, while females are more brown.

5. *Lepomis gibbosus*
Pumpkinseed: Small body shaped much like a pumpkin seed, with orange, green yellow, and blue scales and speckles over their sides and back and a yellow-orange belly. They have an orange-red spot on the margin of their gill cover.

6. *Perca flavescens*, *saawe
Yellow Perch: Elongate body with a blunt snout and longer lower jaw. They have a yellow-green body with 6-8 darker vertical bars along their length.

7. *Pimephales notatus*, *giigoozens
Bluntnose Minnow: Three inch long minnows with a pale olive upper body and silvery lower body. They have a rounded head and terminal mouth.

8. *Luxilus cornutus*
Common Shiner: 4-6 inch fish with silvery-colored body with an olive back and dark dorsal stripe. Breeding males have a reddish/pink tint.

9. *Lepomis gibbosus x macrochirus*, *akwataashii
Pumpkinseed x Bluegill: Appearances vary but usually have dark orange and brown spots and/or chain-like stripes, and the main body color is often a green and light blue combination.

10. *Micropterus dolomieu*, *noosa'owesi
Smallmouth Bass: Slender but muscular body with golden-olive to dark brown scales and dark brown vertical bars across the body but horizontal stripes on the head.

11. *Micropterus salmoides*, *shigan
Largemouth Bass: Olive-green to gray fish with a series of dark blotches forming a jagged horizontal stripe along each side.

12. *Etheostoms nigrum*
Johnny Darter: Small, slender fish with yellow scales, paler sides, and whitish bellies. They have a series of brown or black markings along their sides and two dorsal fins.

13. *Umbra limi*
Central Mudminnow: Small elongate fish burrows tail first into mud. It is brownish on top with pale sides and belly.

14. *Catostomus commersonii*, *nmebine
White Sucker: Long, round-bodied fish with dark green, gray, copper, brown, or black sides and a light underbelly. It has a sucker mouth with fleshy lips.

15. *Notropis stramineus*,
Sand Shiner: Slender, compressed body, no hard rays. They have a silvery head and olive back scales with darker linings.

16. *Percina caprodes*
Common Logperch: Widespread logperch with the typical vertical barring along its sides and a subterminal mouth.

17. *Fundulus diaphanus*
Banded Killifish: Narrow, elongate bluish gray or olive colored body with a darker dorsal surface and a white/yellowish underside. There are vertical bands along the sides—silver in males; black in females.
