My research engages historical archaeological research to investigate dynamics of political regimes in East and Central Asia, and the cultural politics enmeshed in materials of visual arts produced. My work in steppe regions, in particular, challenge normative constructs of nomadic societies, and of the institutions, arts, and politics they create. I have conducted examinations of ancient Chinese documents, as well as led archaeological survey and excavation projects in various regions of Mongolia. This interdisciplinary approach lies at the core of my book on the Xiongnu to construct a multi-faceted narrative of the world's first nomadic empire and demonstrate its lasting impact on the history of pre-modern Asia. I apply these interdisciplinary approaches as well to research and seminars on Central Asia during the era of the Silk Roads, and carry these historical-archaeological endeavors into my current fieldwork on local palaces and frontier constituents of the Mongol Empire.
